Non-Invasive Vascular Studies

Policy Number: 2.01.509  Last Review: 7/2017  
Origination: 7/2016  Next Review: 7/2018

Policy
Blue Cross and Blue Shield of Kansas City (Blue KC) will provide coverage for Non-Invasive Vascular Studies when the medical necessity criteria below are met.

When Policy Topic is covered
Abdominal/Visceral Vascular Studies
Abdominal/visceral non-invasive vascular studies are indicated in the evaluation and/or management of vascular disease along with the narrowing or blockage of arteries that supply blood to the abdomen including intestines (mesenteric vascular disease), pelvic and scrotal contents, and/or retroperitoneal organs including the kidneys (renal vascular disease).

Abdominal, Retroperitoneal and Pelvic Organs (93975, 93976)
Abdominal, retroperitoneal and pelvic organ vascular studies may be considered medically necessary for the following indications:
- Uncontrolled hypertension.
- Stenosis of visceral artery (atherosclerotic, fibromuscular dysplasia, vasculitis, functional).
- Aneurysm of visceral artery.
- Portal hypertension, with or without ascites.
- Cirrhosis of the liver.
- Venous embolism, hemorrhage, infection, and/or thrombosis of visceral vein (renal, hepatic, mesenteric, portal or splenic).
- Stenosis of visceral vein (renal, hepatic, mesenteric, portal or splenic).
- Complications of internal (biological) (synthetic) prosthetic device implant and/or graft.
- Complications in abdominal organ or tissue transplant.
- Pain or swelling of scrotal contents which may be a result of suspected obstruction in arterial inflow or venous outflow to testicles or related structure.
- Torsion of the spermatic cord; acute epididymitis or epididymoorchitis; or torsion of the testicular appendages.
- Hypertension and normotensive renovascular disease with impaired renal function which could be acute kidney failure, chronic kidney disease, end stage renal disease, or other vascular disorders of the kidneys.
- Pain or swelling of the female genital organs which may be the result of torsion of the ovaries, ovarian pedicle or fallopian tube.
- Trauma to the abdominal, retroperitoneal and/or pelvic organs, arteries, and/or veins.
- Abdominal aortic aneurysms > four cm in diameter may be followed with abdominal ultrasound every six months.

**Aorta, Inferior vena cava, Iliac Vasculature and Bypass grafts (93978, 93979)**

Vascular studies of the aorta, inferior vena cava, iliac vasculature and bypass grafts may be considered **medically necessary** for the following indications:
- Atherosclerosis of aorta.
- Atherosclerosis of the extremities with intermittent claudication.
- Atherosclerosis of other specified arteries.
- Aortic aneurysm and dissection.
- Aneurysm of iliac artery.
- Thromboangiitis obliterans (Buerger’s disease).
- Peripheral vascular disease unspecified.
- Arterial embolism and thrombosis of abdominal aorta.
- Arterial embolism and thrombosis of iliac artery.
- Phlebitis and thrombophlebitis of iliac vein.
- Venous embolism and thrombosis of vena cava.
- Complications related to surgical procedures involving prosthetic device implant, graft, and/or shunts.
- Complications of organ or tissue transplant.
- Trauma to the chest wall and/or abdomen resulting in a possible injury to the aorta, inferior vena cava and/or iliac vasculature.

**Penile Vascular Studies (93980, 93981)**

Penile vascular studies may be considered **medically necessary** for patients with treatment failure for a documented groin injury where a vascular etiology for impotence is suspected.

**When Policy Topic is not covered**

Vascular studies are **not medically necessary** as the initial diagnostic modality for the evaluation of abdominal pain/tenderness.

Routine imaging of the iliac veins is **not medically necessary**. Exceptions will be made for specific medical indications of possible propagation of a known thrombus for consideration for placement of a vena cava filter device via the femoral approach. The medical necessity must be documented in the medical record.

If a patient is going to proceed on to other diagnostic and/or therapeutic procedures regardless of the outcome of the noninvasive studies, the non-invasive vascular studies are usually **not medically necessary**. The outcome must impact the clinical management of the patient.
Duplex scans of the arterial inflow and venous outflow of penile vessels are considered **not medically necessary**, except for the indication listed above.

Vascular studies not meeting criteria are considered **not medically necessary**.

**Description of Procedure or Service**

**Overview**

Non-invasive abdominal/visceral vascular studies utilize ultrasonic Doppler and physiologic principles to assess the irregularities in blood flow in renal, iliac, and femoral artery systems. These tests are also used to diagnose aortic aneurysms. Noninvasive abdominal/visceral vascular studies include the patient care required to perform the studies, supervision of the studies, and interpretation of study results, with copies for patient records of test results and analysis of all data, including bi-directional vascular flow or imaging when provided.

Duplex combines Doppler and conventional ultrasound, allowing the structure of blood vessels, how the blood is flowing through the vessels, and whether there is any obstruction in the vessels to be seen. Color Doppler produces a picture of the blood vessel, and a computer converts the Doppler sounds into colors overlaid on the image, representing information about the speed and direction of blood flow. Using spectral Doppler analysis, the duplex scan images provide anatomic and hemodynamic information, identifying the presence of any stenosis or plaque in the arteries. Duplex scans are in real-time.

Diagnostic tests must be ordered by the physician who is treating the patient and who will use the results in the management of the patient’s specific medical problem. Services may be deemed medically necessary when all of the following conditions are met:

1. Signs/symptoms of ischemia or altered blood flow are present;
2. The information is necessary for appropriate medical and/or surgical management;
3. The test is not redundant of other diagnostic procedures that must be performed. Although, in some circumstances, non-invasive vascular tests are complimentary, such as MRA and duplex, where the latter may confirm an indeterminate finding or demonstrate the physiologic significance of an anatomic stenosis such as in renal, iliac, and/or femoral arteries.

**Billing Coding/Physician Documentation Information**

- **93975**  
  Duplex scan of arterial inflow and venous outflow of abdominal, pelvic, scrotal contents and/or retroperitoneal organs; complete study
- **93976**  
  Duplex scan of arterial inflow and venous outflow of abdominal, pelvic, scrotal contents and/or retroperitoneal organs; limited study
- **93978**  
  Duplex scan of aorta, inferior vena cava, iliac vasculature, or bypass grafts; complete study
- **93979**  
  Duplex scan of aorta, inferior vena cava, iliac vasculature, or bypass grafts; unilateral or limited study
93980  Duplex scan of arterial inflow and venous outflow of penile vessels; complete study
93981  Duplex scan of arterial inflow and venous outflow of penile vessels; follow-up or limited study

**ICD-10 Codes**

**For 93975 and 93976**

For codes in the table below that require a 7th character: letter A initial encounter, D subsequent encounter or S sequela may be used.

- **B18.xx**  Chronic viral hepatitis
- **B19.xx**  Unspecified viral hepatitis
- **I10**   Essential (primary) hypertension
- **I11.0**  Hypertensive heart disease with heart failure
- **I11.9**  Hypertensive heart disease without heart failure
- **I12.0**  Hypertensive chronic kidney disease with stage 5 chronic kidney disease or end stage renal disease
- **I12.9**  Hypertensive chronic kidney disease with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
- **I13.0**  Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
- **I13.10**  Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
- **I13.11**  Hypertensive heart and chronic kidney disease without heart failure, with stage 5 chronic kidney disease, or end stage renal disease
- **I13.2**  Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
- **I15.0**  Renovascular hypertension
- **I15.1**  Hypertension secondary to other renal disorders
- **I15.2**  Hypertension secondary to endocrine disorders
- **I15.8**  Other secondary hypertension
- **I60.00**  Nontraumatic subarachnoid hemorrhage from unspecified carotid siphon and bifurcation
- **I60.01**  Nontraumatic subarachnoid hemorrhage from right carotid siphon and bifurcation
- **I60.02**  Nontraumatic subarachnoid hemorrhage from left carotid siphon and bifurcation
- **I60.1**  Nontraumatic subarachnoid hemorrhage from middle cerebral artery
- **I60.10**  Nontraumatic subarachnoid hemorrhage from unspecified middle cerebral artery
